

Installing a certificate on a Windows 10 device

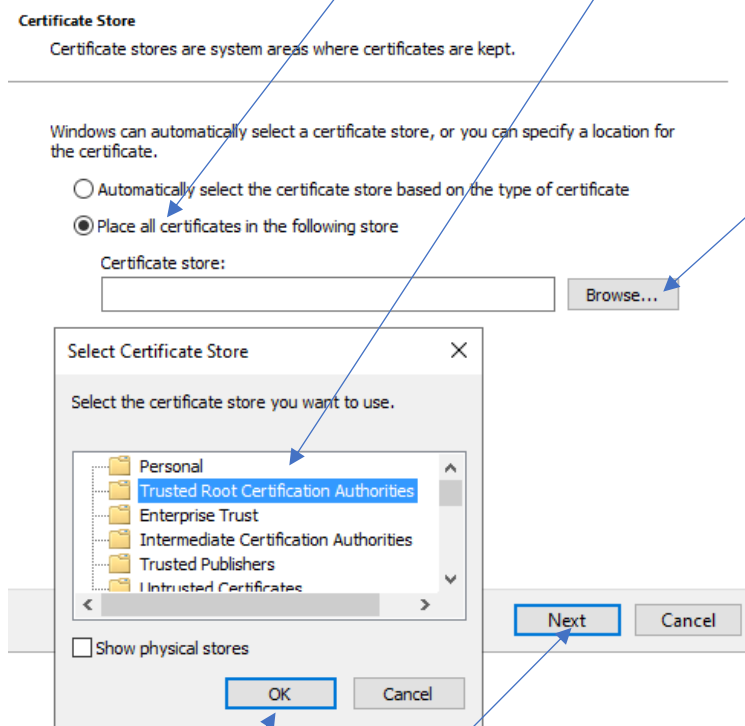

1. To install the certificate open a browser and go <https://cloudhappi.com/cert> and download the certificate.
2. Extract the file out of the zip file.
3. Locate the file called 'ca'
4. Next right click the file and select the install certificate option. If you get a security message, select open (see below).

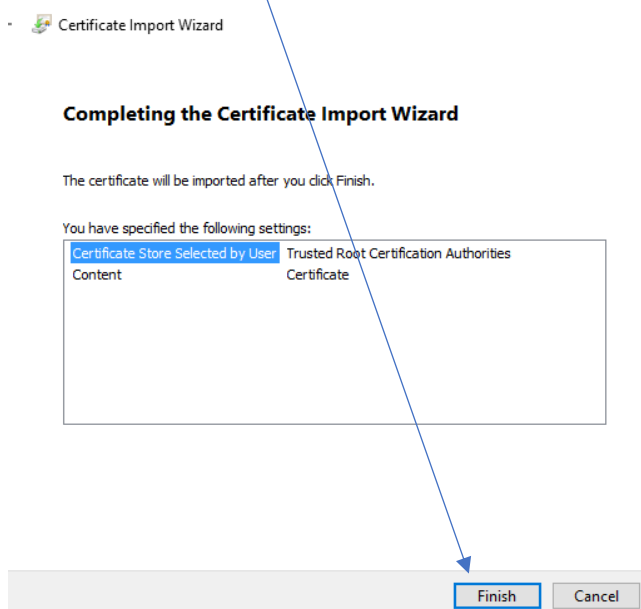

5. Next you'll be prompted with the install wizard, see below. Select **local machine** as the store location and click next.

- On the next screen you will be prompted as to where to place the certificate. You need to select the option to **place the certificates in the following store** and click the **browse** button and select the store called **Trusted Root Certification Authorities**,

- Then hit **ok** and click **next**.
- The click **finish** to complete the process.

Once completed you can now access the internet when in the school as needed.
