

Installing a certificate on an IOS device

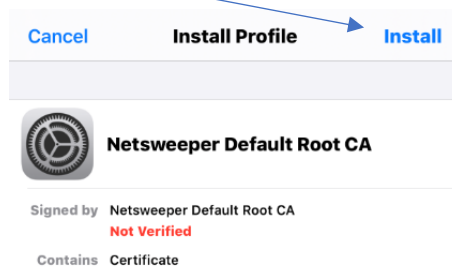

1. Open safari and go <https://cloudhappi.com/cert> and download the certificate.
2. Open Files and locate Downloads folder, tap it
3. Locate **ca.zip** and tap it.
4. The file is extracted and will appear as **ca.crt**
5. Tap **ca.crt** to confirm it is OK. You will see a message to go to Profile in settings to install
6. Go to settings and then select General, scroll down and select profile.

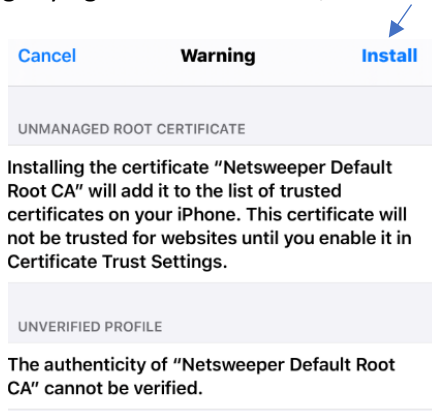

7. Under profile select the Netsweeper Default Root CA (see below).

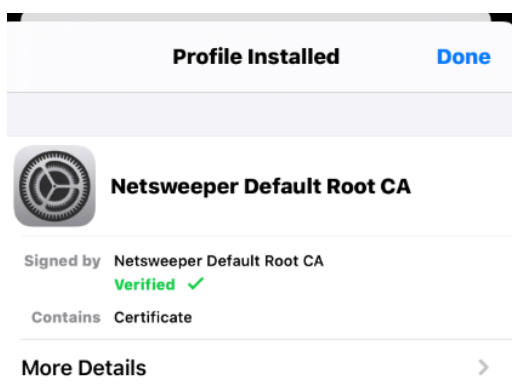

8. Next click the install button as shown below. You'll be prompted to enter your device passcode.

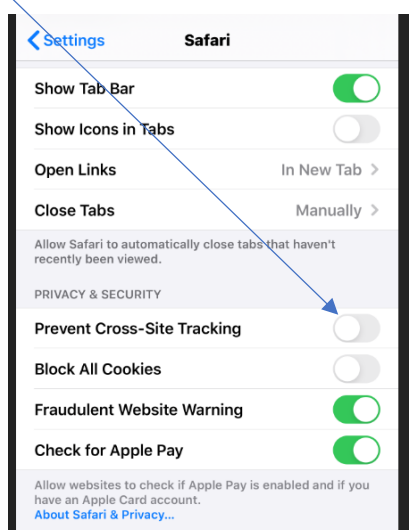

9. You'll next get a warning saying it can't be verified, click install to continue.

10. Once installed you will see the below if completed correctly.

11. Finally go back to settings and click on Safari and scroll down to the 'prevent cross-site tracking' option and turn it off (see below).

8. To enable the full trust for the certificate, click on **Settings – General – About – Certificate Trust Settings** and turn on the certificate
